2026

Between constants and change, new directions unfold.

From this point onward, the work takes shape through iteration, adjustment and gradual shifts in direction. Nothing arrives complete, but things begin to hold, forming ways of working that lead to what comes next, across contexts and evolving conditions, shaping sustained practices over time, each with a direction of their own.

Altered Variables

Curatorial Statement

Between constants and change, new directions unfold.

Building on the notion of reconfiguring and reimagining existing systems, the ADM Show 2026 theme “Altered Variables” reflects the class of 2026’s thinking on how individual perspectives and practices intersect, influence one another and in turn reshape the larger system in distinct ways. The exhibition brings together diverse practices shaped by shared conditions, marking a collective moment of experimentation, transition and the emergence of voices at the threshold of professional practice.

Each work in the exhibition evolves through iteration, adjustment and gradual shifts in direction. Nothing arrives fully formed; instead, practices take hold over time, shaped by ongoing negotiation with context and condition. What emerges are not fixed outcomes but ways of working that remain responsive, generative and open-ended, each carrying their own trajectories while contributing to a broader, evolving field of practice.

**A
DM**

Established in 2005 as Singapore's pioneering design and media arts institution, the School of Art, Design and Media (ADM) at NTU provides world-class education and conducts cutting-edge research in technologically enabled art, design and media practice. According to the QS World University Rankings by Subject 2026 (Art and Design), ADM is ranked 7th globally for employer reputation among design schools, reflecting the strong confidence employers worldwide have in the quality, creativity and professionalism of our graduates.

We are a community of artists, thinkers and practitioners committed to meaningful and innovative engagement with real-world challenges. Our graduates strive to be proactive and compassionate creative leaders, breaking new ground across Asia and beyond.

Bachelor of Fine Arts Programme

Design Art

The Bachelor of Fine Arts in Design Art combines three pathways comprising Interaction, Product Design and Visual Communication.

Design guides us, and challenges our perceptions of the world. It encompasses a variety of approaches to communication and problem-solving through visual materials and culture. In Design Art, students are taught to be critical, creative and skilled designers and artists, developing innovative and exciting new visions across disciplines.

Media Art

The Bachelor of Fine Arts in Media Art combines four pathways comprising Animation, Game, Filmmaking and Photography.

Media Art is about telling stories using time and space, and sound and images. The art of using media to create is fundamentally important to us as individuals, communities and cultures. It is how we communicate experience, remember the past, document the present and imagine the future.

Interaction

Interaction expands the possibilities for new methods and theories, equipping creative practitioners to navigate an increasingly interactive world.

These projects show how our students engage with technology and software, combining concepts and narratives with user experience, space and play. The emphasis is on using technology as a tool to support creativity and experimentation, often extending into installation, sound, web-based work, and other digital forms.

dayo
Digital

dayo is an interactive discovery app that transforms leisure time into inspirational and meaningful exploration. The app aggregates events, from high-profile exhibits to niche community workshops. By leveraging generative solutions to uplift local arts communities, *dayo* provides tailored inspiration that helps users find their next favorite space.

Inspired by the erosion of third places in Singapore, *dayo* is built on the belief that for culture to survive, it must be as adaptable as it is authentic.

WDYM?

Digital, UI/UX Design

Gen Alpha students, growing up immersed in social media, often communicate using slang, abbreviations, and internet-influenced expressions. While this language reflects their cultural identity and sense of belonging, it can create communication barriers between teachers and students, particularly in secondary school settings. Teachers may struggle to interpret these evolving expressions, leading to misunderstandings, weaker rapport, and reduced classroom engagement.

This project explores how design can bridge this generational language gap by developing a hybrid classroom tool that helps educators interpret slang through contextual meaning, tone, and examples. By supporting clearer understanding across both online and in-person environments, the project aims to foster more empathetic and effective teacher-student communication.

法乐 (To face the music)

Electronic Sound Performance

This project interrogates the materiality of the rattan cane—an instrument of both state and domestic discipline—by repurposing it as a gestural interface for electronic music. By mapping the mechanics of the strike to digital soundscapes, the work confronts the somatic memory of the object through live performance. It poses a critical question: can an object so deeply entrenched in the history of corporal punishment be re-signified through the medium of sound?

|Ask (me) anything

Interactive Installation, Experimental Publication, Screen

|Ask (me) anything critiques the conflict where individuals find it easier to express vulnerability to machines than to their closest human relationships. With increasing anthropomorphisation of AI, users project empathy onto systems that simulate understanding without ever possessing it.

The encyclopaedia's analog nature mimics the exhausting labour of prompting LLMs where readers flip, cross-reference, and loop through entries seeking clarity they may never find. Supplementing it is an interactive screen that detects the viewer's emotion, not always accurately, collapsing the distance between self-reflection and machine query.

Is our growing comfort with AI companionship genuine connection or are we simply falling in love with our own reflection in the machine?

Sowmya Sreeshna

Adeptus Mechanicus: Faith in the Age of Idiot Savant

Interactive Installation, AI Interface, UI/UX Design, Branding, Acrylic

Our reliance on algorithmic systems has transformed daily digital interactions into a form of modern ritual. *Adeptus Mechanicus* is an interactive installation that investigates this shift, using the "oracle" as a speculative model for how AI mediates contemporary truth and guidance.

This work serves as the artist's visualization and critique of the relationship between spirituality and artificial intelligence. By introducing a digital deity whose specific role is centered on fortune, the installation explores how technological reliance is shifting into symbolic dependence. Within this ritualized environment, users submit anonymous confessions and receive open-ended responses that demand personal interpretation. Through branding, interface design, and physical fabrication, the project examines the role algorithmic processes play in shaping how we derive meaning and belief today.

Hostile Comforts Interactive Installation

Hostile Comforts is an installation that examines the quiet violence embedded within everyday urban design. The project focuses on hostile architecture, where public spaces are intentionally shaped to control behaviour and discourage rest, particularly for people experiencing homelessness. Through abstract visuals, shifting projections, and an immersive soundscape, the installation reinterprets these hidden forms of exclusion. A first person narrative guides viewers through the perspective of someone searching for a place to rest, revealing how familiar objects and environments can become rejecting and unwelcoming. The work transforms subtle design strategies into an experience, encouraging audiences to recognise how comfort in public space is often conditional and shaped by societal values.

Clara Chiong (Jiang Yixuan)

Sure Sotong

Crochet Installation

Sure Sotong is an exploration of what it's like to embrace being blur, seeing the beauty in slowing down and taking moments to pause, through the lens of crochet.

Not knowing what comes next in life can feel daunting. In Singapore, where efficiency and being kiasu are undeniable trains of thought, there is strong pressure to always be certain and have clear plans all the time. As such, moments where one can be a blur sotong without judgement are rare.

This installation creates an embracing space where thoughts can settle naturally without feeling rushed. It invites people to slow down, reflect and feel comfort in not having all the answers right away, reminding them that it is okay to simply be.

Lai Kyler (Li Kaile)

In This/Another Life

Interactive digital, Design

This project is an interactive installation that reflects on the idea of fate and the quiet tension between who we are and who we feel we could have been. As we move through life, we often question whether our paths are truly chosen, or shaped by expectations, circumstance, and unseen influences. The work invites viewers to confront this uncertainty, not by offering answers, but by creating space for reflection.

Drawing loosely from Chinese face reading as a cultural reference, subtle visual cues are embedded within the environment to suggest associations between appearance and destiny without defining them. The installation consists of three mirrors, where the viewer's gaze triggers shifting visual distortions across adjacent reflections, fragmenting and reconfiguring their sense of self in real time.

A take-away pamphlet introduces each visual effect with guided phrases, before revealing a hidden insert that reframes these meanings. By leaving key statements unfinished, the work ultimately asks viewers to consider: in this life, what is truly yours or what might have been otherwise?

The Great FireNET

Interactive Screen-based experience

The Great FireNET reimagines the rhizomatic and localized structure of the Chinese internet as an explorable 3D virtual environment. Rather than exploring the web through flat browser windows, viewers navigate a world where vernacular aesthetics, algorithmic control, and censorship are spatialized, transforming invisible digital systems into a tangible, experiential landscape. This work mirrors life behind the Great Firewall—where creativity thrives through constraint, adaptation, and coded expression. It celebrates the humor and ingenuity of Chinese online culture while seeking to twist the narrative of a universal, Western-centered World Wide Web.

Pulang/Di Antara

Interactive Digital Installation

Pulang/Di Antara – to return, to be in between – is an interactive digital installation inviting players to navigate a speculative landscape shaped by cultural erosion and fragmented identity. Grounded in Javanese cultural references, the work reflects on the transformation of sub-ethnic identities within broader national and diasporic contexts. Drawing from batik’s philosophy of layering and resistance, these principles unfold as spatial logic, shaping an environment that remains partial, obscured and echoing the instability of cultural memory.

Through exploration, players encounter traces of a place both familiar and distant, mirroring the experience of returning to an ancestral land that no longer fully belongs to them. Through spatial storytelling, absence, and atmosphere, the work evokes longing, disorientation, and quiet reflection on what it means to belong.

Rykiei Goh En Qi (Wu Enqi)

Heaty Futures

Interactive Installation, Phygital Experience

Heaty Futures is a speculative installation that explores a future shaped by extreme urban heat set in Singapore 50 years later. As temperatures intensify, how might climate-adaptive food therapy evolve to help us respond to shifting environments?

Drawing on Traditional Chinese Medicine (TCM) as a cultural framework, AI interprets user's bodily data to infer internal yin/yang tendencies. Users approach the screen to begin the experience. It starts with tongue analysis via a webcam for colour sampling, followed by placing a finger on a sensor to capture their pulse.

The journey concludes with a speculative, AI-generated recipe printed as a takeaway thermal receipt. Ultimately, the work is a conversation piece on how cultural food knowledge and contemporary tools might help us imagine new forms of internal adaptation to future climate change.

My prayer rings here and forever

Mixed Media Installation; Ceramic, Sound, Wood, Aluminium Frame

Reflecting on how the ordinary can be encountered as sacred, the work is inspired by a Thai Buddhist belief that monastery roof tiles absorb the chanting of monks, becoming sacred.

Comprising ceramic tiles, each is handmade through a ritualised process, where making itself becomes a gesture of devotion. Prayer is recorded, rerecorded, and played through the tiles. As voice cycles through the material, words dissolve into resonance. Through this process, the tiles act as both transmitter and receiver, becoming vessels carrying hope and yearning in the pursuit of religious connection.

i sew, and sew again, so i can remember

Live Performance with Cow Grass, Scissors and Biodegradable Threads

In land-scarce Singapore, redevelopment became an inevitable solution for a brighter future; forgetting becomes a necessity, a shield for the modern living (Connerton, 2009). Yet, preserved spaces complicate this narrative, pruning tensions between state-driven histories and personal memory. Rather than assigning fault, the piece asks: How do we, as Singaporeans, remember? In a city that equates remembering with constant redevelopment, are there spaces (physically and emotionally) left available for remembering in an already preoccupied Singapore?

i sew, and sew again, so i can remember is a live performance exploring the cultural identity of Singapore, through the ritual of cutting and re-stitching blades of grass. The gesture becomes an act of "grafting", tracing what has been lost, what remains, and what will continue to be erased.

The Mirage of Harmony

Interactive Installation

The Mirage of Harmony is a speculative world-building project that reinterprets Tian Ren He Yi (unity between humans and nature) through a future of algorithmic ecological control. It imagines a world where living nature has been replaced by an artificial environmental system governed by data, infrastructure, and continuous technological intervention. This invisible technological network forcefully simulates ecological harmony, regulating every physical and biological process to maintain an illusion of perfect balance. Through speculative architectural design and immersive installation, the project makes this fictional system visible and experiential. By constructing this future world, it critiques pseudo-nature, surveillance, and the relentless technological control of ecology in modern urbanism.

OUROBOROS_v:init

BCI Interactive Installation; EEG Brainwave Data, Generative Visuals, Sculptural Fabrication

OUROBOROS_v:init is a Brain-Computer Interface (BCI) neuro-interactive installation that translates live EEG data into a generative visual environment in real-time. Contemporary culture has repackaged ambition as identity and rest as failure; producing subjects who experience their own depletion as personal inadequacy rather than structural consequence. The mesolimbic reward pathway, the brain's primary wanting circuit, does not fire upon arrival. It fires in pursuit. The destination was never the point.

Here, the mind is the only variable. High beta-wave activity; the neurological signature of goal-directed effort accelerates visual collapse. The installation engineers a single irreducible confrontation: the harder you try to stabilise the system, the faster it collapses. The compulsion to optimise persists even when you are the problem.

Hour Swap

Digital, UI/UX Design

In our fast-paced city, we live closer than ever, yet often feel like strangers. The precious "Kampung Spirit," that had once made communities feel like home, has faded.

Hour Swap is a movement designed to restart the heartbeat of our neighbourhood. By exchanging time instead of money, we move away from transactional living towards genuine care. We believe that regardless of our age, everyone has something meaningful to offer. A student could provide Tech Rescue, a busy parent may find a Helping Hand, and a senior passes on precious Heritage Knowledge.

Every person becomes a vital pillar, and these small moments grow into deeper bonds. We aren't just trading tasks, we are proving that no one has to manage alone.

Objects for the moment

Interactive Devices

A re-imagination of how Buddhist rituals, beliefs, and objects can be translated into contemporary interactions for the everyday. The project compresses these experiences into handheld devices, reinterpreted as modern-day dharanis—tangible interfaces that invite engagement through action and perception.

Through the use of everyday gestures and Buddhist practice, these devices function as points of interaction, allowing users to engage with the essence of its teachings in daily life. Rather than replicating tradition, the work focuses on recreating the subtle, personal experience of the sacred in a reduced and accessible form for use in the moment.

Ferrum

Mixed media installation with experimental film and generative data visualisation

Ferrum is a three-part artistic research project translating the environmental consequences of the global iron and steel industry into material form. An experimental film traces iron from cosmic origin to ecological crisis. A kinetic installation enacts a feedback loop: a camera detects rust forming on iron filings; a motorised gantry attempts to relocate healthy material away from contamination. Yet iron oxide is not magnetic—as filings rust, they exit the system's control. The camera still sees them; the gantry still moves; but the corroded particles no longer respond. A third component predicts rust patterns alongside industry statistics.

Wei Qin

Feral Persona

Mixed Media Installation

Feral Persona is a speculative hybrid installation that explores the "afterlife" of plastic as an autonomous material force in the Anthropocene. While plastic is often categorized as a passive pollutant, this project investigates its transition from a human-made consumer product into a "feral" entity, one that fuses with natural matter to form a new, synthetic ecology.

The work utilizes a dual structure: a physical sculpture composed of stone and recycled plastic, alongside an embedded digital system that visualizes the microscopic "life" of the material through Reaction-Diffusion logic. Ultimately, the project decenters the human perspective, inviting viewers to reflect on material agency, geological time, and the consequences of human systems losing control over the materials they produced.

Animation

Animation has grown to be a key component in the filmmaking, game design, visual effects and advertising industries, bringing the farthest reaches of our imagination to vivid life. It also plays a vital role in new media, including motion comics, animated illustration, motion-based fine art, and data visualisation.

These projects showcase how students integrate traditional narrative animation techniques with cutting-edge digital methods, exploring both storytelling and experimental approaches to the medium.

EGG

3D animation

An apex predator, Thyren, hunts down a scavenger, Noko, after it tries to eat its only egg. What starts as a tense, high-speed chase through the harsh desert ends in a brutal kill, seemingly just another predator-prey encounter.

But in the quiet aftermath, a discovery shifts the perspective, revealing that both creatures were driven by the same instinct to protect and survive.

The film explores the idea that in nature, there isn't a right or wrong, just survival.

Directed and created by Jovan Ong, with original music by Eilonwy Krieg and sound design by Matthias Eckhardt, in collaboration with the State University of Music Trossingen, Germany.

Henceforth (Writer and Illustrator)
Graphic Novel

Henceforth follows Marcus Sault, who shares a close bond with his mother in childhood but grows resentful in adulthood after she begins struggling with a complex mental illness. As her full-time care taker, he feels trapped by the cage of his circumstances, developing bitterness towards both his situation and the wider world. His internal conflict, shaped by cynicism and self-deprecation, begins to distort his perception of reality. After a life changing event, Marcus is forced to confront his unresolved guilt and grief, leading to a psychological unravelling reflected in the collapsing world around him. The graphic novel uses visual techniques to externalise his internal state, highlighting the relationship between perception, emotion, and reality.

Jasmine (Writer, Illustrator, Music Producer)
Multimedia project

Jasmine is a multidisciplinary concept album and screenplay exploring the resurrection of a heritage Singaporean jazz bar. The narrative follows Jasmine, who abandons a New York career to salvage the very space that defined her musical foundation. Across six chapters of immersive music, illustration, and character interviews, the work interrogates the precarious reality of maintaining creative spaces while offering a defiant, hopeful vision for the future of Singapore's arts.

Product Design

Every object we encounter, whether cutting-edge consumer technology or a simple everyday tool, shapes the way we live and interact with the world.

Product design is both a disciplined craft and a creative art, demanding that designers address fundamental questions of human need and desire while navigating the practical challenges of materials, construction and usability.

In these projects, our students engage thoughtfully with the user, the environment and the broader societal impact of their designs, applying the principles of “Design Thinking” throughout the creative process.

Root and Strand: Speculative Bio Sculptures

3D-printed sculptural forms combined with human hair and living wheatgrass

At what point does the human body become waste? Human hair is commonly tied to beauty and identity, but discarded as waste when shed. Similarly, plants are valued in growth but rejected in decay. This project merges these overlooked materials through a series of alien-like bio-sculptural forms that guide wheatgrass root systems.

The forms appear almost animated, as if moving or growing, giving a sense of life back to discarded hair and decayed plants typically seen as waste. By embedding hair as a structural and nutritive medium, the work recontextualizes discarded matter, challenging perceptions of life and death and proposing an alternative ecology where waste becomes a site of transformation and continuity.

Lu Yu-Lun (Ruby)

Recur: Li (瀝)

Physical Machine

Recur: Li (瀝) is a reimagined coffee and tea vessel that transforms into an aroma diffuser for a solo practitioner, merging functional brewing with a ritualistic sensory experience. It encourages users to appreciate leftover coffee grounds and tea leaves through scent, fostering a slower and more mindful daily rhythm.

Rooted in traditional brewing practices yet adapted for a fast-paced contemporary lifestyle, the design integrates subtle sensory cues to communicate cultural meaning. A central scent disc gradually accumulates layered aromas throughout the day, forming a temporal archive of use. These evolving fragrances act as mnemonic triggers, reflecting personal memory, cultural identity and an ongoing journey of self-discovery.

Hug That Thing

Physical Cushion Models

Hug That Thing is a project designed to address the stresses of young adults in the face of economic precarity, an intensely competitive job market, and "quarter-life crises". That Thing is a sensory cushion, designed to calm and soothe individuals with deep pressure and tactile therapy. It bears humanesque features along with it is jointed and movable digits, allowing it to be posable and easy to interlace fingers with. That Thing can rest comfortably around the neck and shoulders, providing ample pressure to ground your senses to the present. That Thing comes with a separate sleeve for pillow protection as well as for personalisation.

Roll Call

Physical Toy

Roll Call is a modern reinterpretation of tactile play, drawing inspiration from marble racing and labyrinth games. The project is reimagined and designed as a tabletop activation, meant to be placed in public shared spaces such as kopitiams and museums.

This game set supports both individual and multiplayer experiences, where players take on different roles to build or sabotage using elements such as barriers and varied textured surfaces. This introduces unpredictability and encourages collaboration during multiplayer sessions.

By embedding play into everyday environments, *Roll Call* offers an alternative to passive screen use. This invites children and adults to be present, transforming idle time into opportunities for offline play through interaction.

Playable Fables

Wooden Mechanical Toys

Playable Fables explores play-based learning in children's toys. Through the depiction of classic fables in the form of a series of mechanical children's toys, the morals of these fables are taught through cognitive play rather than traditional verbal means, fostering a deeper understanding of their learning lessons. This project serves to create a communal interactive platform for children to play with purpose, learning a meaningful spread of morals and values through the iconic stories of "The Tortoise and the Hare", "The Crow and the Pitcher", and "The Frog in the Milk Pail".

Figuring

Digital and Physical (Resin and Acrylic)

Figuring proposes a new paradigm for figurines, not as decorative collectibles, but vessels of reflection, negotiation, and digital residue.

The project examines how identity is constructed through introspection, aspiration, performance, and algorithmic interpretation. Users undergo private and public reflective processes to generate a digital self that is translated into a physical object composed of four layers: the core, the ideal, the perceived, and the data self.

Rather than presenting identity as fixed, *Figuring* treats it as a living archive that functions as a time capsule, evolving over the years. The work questions whether we are who we believe ourselves to be, who we aspire to become, who others perceive us as, or who algorithms calculate us to be.

Denoise

Interactive WebGL Experience

Poor acoustics can make a space uncomfortable or overstimulating. Designers often choose materials, shapes, and layouts without understanding of how these choices impact sound. As a result, sound is often overlooked in early-design stage planning. This gap grows with the rise of multi-purpose spaces, where functions and layouts shift constantly. These shifts may create conflicting acoustic experiences.

This project addresses the gap through an interactive web experience that advocates for greater acoustic awareness in spatial design.

By altering spatial form and materials, players determine whether ambient noise or inner voice is amplified, revealing how design decisions influence the acoustic experience.

Photography

Photography expresses ideas and captures moments of reality in ways that are unique to the medium. As digital imaging and post-production techniques continue to evolve, the boundaries of photography have expanded significantly.

The works in this section show how our students build on both traditional photographic practices and contemporary digital methods, while also exploring emerging dimensions such as expanded image-making, immersive visual storytelling and cross-disciplinary experimentation. Together, these approaches extend the core principles of photography, opening up new experimental forms and ways of seeing.

Under the Influence

Installation

This work examines the artist's personal relationship with alcohol as both an object of desire and a source of bodily rejection and consequences. Through reflective surfaces of cans, familiar imagery of the drinking culture and nightlife in Singapore appear intact. Yet reality appears differently in stretched, warped, and displaced murals across the wall and ground. The work positions the body and skin as a site of resistance. What is consumed does not assimilate with the body, but instead fractures, rejects, and reconfigures reality. By inviting viewers to walk around and beneath the alcoholic packages, the installation involves them in this system of attraction and distortion.

Quietude

Photobook

Quietude explores the unfamiliar within the familiar landscape of Singapore. Through a series of carefully composed images, the artist evokes a sense of detachment from the city we live in, in an attempt to separate himself from hyperconnected modern life. The act of photography then transforms into a act of detox from the constant exposure to today's modern culture of perpetual digital interaction and social media. This project evolves photography from mere documentation into a therapeutic practice that helps to cultivate a sense of tranquility and peace amidst the urban bustle.

Clare Joseph

Maria Video

This project is inspired by the 1950 case of Maria Hertogh—a Dutch girl raised as Muslim whose marriage and subsequent custody case sparked one of the most significant inter-religious events in Singapore’s history. Known as the Maria Hertogh Riots, 18 people died and many more were injured. Using this as a point of departure, the work is underscored by narratives of identity, belonging and faith. While that case demonstrated conflict, this project turns toward understanding. How do inter-religious couples—particularly Muslim–Christian unions—navigate faith, family, and community in their daily lives? The project seeks to understand the lived experience of “inter-religion” in a multicultural society. The hypothesis is that inter-religious relationships can reveal profound ways of understanding coexistence and the blending of cultural frameworks. Joseph sat down with three couples who live and work in Singapore. The project is an audio-visual work.

The Eternal Feminine

Series of 5 Prints

The Eternal Feminine is a series that seeks to deglorify the idealised notion of womanhood by focusing on its quieter, often overlooked realities. The project reveals the irony of the title "eternal feminine"; a phrase that seemingly evokes beauty and grace, yet instead examines how boundaries are negotiated and how a woman's life is lived, managed, and quietly endured. Navigating through the gendered landscape of everyday life from youth to old age, the images remain unfiltered, unresolved, and ongoing.

Rather than arguing an opinion, the project holds space for recognition, inviting the viewer to see the familiarity and inevitability of the unexceptional.

Son Of A (Production Designer)

Live Action Film

This social realist film portrays the dilemmas of a cross-national family in Singapore, making visible its hidden complexities. The film reveals the plight of one such child in our society.

What it means to be a Tree

Series of 5 Prints

This project explores how nature exists within systems of control in Singapore's urban landscape. Photographed in black and white, trees are presented as quiet portraits, emphasising form, texture, and the physical marks of human intervention. Pruned branches, constrained roots, and redirected growth reveal how urban trees adapt within regulated environments. Unlike forest trees shaped by natural cycles, urban trees grow within limits defined by planning and maintenance. Through this contrast, the project reflects on how care and control coexist, suggesting parallels between ecological systems and human life, where growth is guided, negotiated, and never entirely free.

Filmmaking

Live-action film remains a cornerstone of contemporary media, harnessing cinematography, performance and storytelling to create experiences that captivate and resonate.

These works demonstrate our students' skill in film production, ranging from narrative fiction and documentaries that explore people and places, to experimental films that challenge conventional notions of cinematic storytelling.

Risorcery: Reviving Risograph Culture in ADM Branding and Print

This project seeks to revive risograph culture within the School of Art, Design and Media (ADM) at Nanyang Technological University through the reinstatement of the risograph club, Risorcery. By creating more hands-on opportunities for ADM students to engage with risography, the project addresses two key issues: the lack of risography education amongst students and the limited accessibility to learning risography in Singapore. Through comprehensive workshops, student-friendly resources focused on risograph printing in ADM, and the cultivation of works produced by ADM students, the project aims to introduce risography in a low-pressure and approachable way. Ultimately, the goal is to ensure long-term sustainability of Risorcery by establishing risography as a regularly used tool within ADM, allowing the club to continue operating beyond the scope of this project.

Face to Face

Publication and Branding

Face to Face is a project that uses pareidolia, the tendency to perceive faces in patterns, to reframe the way we view insects. Humans are instinctively drawn to faces, yet insects are often seen as alien due to their small, unreadable faces. By highlighting species with face-like markings and transforming these visual cues into character-like visuals, the project invites viewers to engage with insects in a more familiar way. Through a publication and branding extension, *Face to Face* sparks curiosity, challenging how facial familiarity shapes our perceptions and encouraging a deeper, more empathetic connection with these often-overlooked creatures.

Love Hunt

Social Media and Website

In a society that prioritises efficiency and rewards early planning, young adults in Singapore have developed a more superficial view of relationships. However, if love becomes overly pragmatic, what is left of it?

Love Hunt is a social media campaign and personality quiz website that highlights how young adults in Singapore navigate modern relationships, revealing uncomfortable truths beneath the humour.

This project invites viewers to laugh at their own romantic pragmatism while confronting the discomfort behind it. The campaign's ultimate aim is to provoke reflection on what love means in a context where practical expectations often take precedence over connection.

The Chilli Club

Branding, Merchandise and Publication

What can a spoonful of sambal reveal about the people, memories, and traditions behind it? Often treated as a small side on the plate, chilli is easy to overlook, yet it quietly shapes how meals are shared, remembered, and enjoyed across Singaporean kitchens. *The Chilli Club* brings together chilli condiment recipes and cultural stories through visual interpretations designed to engage young adults today. By learning from homemakers and aunties who carry these recipes through everyday practice, *The Chilli Club* supports the sharing of knowledge across generations.

Alongside this, a hands-on cooking workshop invites young adults to prepare chilli condiments together and reflect on how they learn through making. Through something as small as a spoonful of sambal, *The Chilli Club* reminds us that what sits quietly at the side of the plate often carries the strongest stories.

Type in "I" Packaging and Print

Type in "I" explores type to uncover a more innate part of ourselves through the very root of words and the tools we use to communicate. In today's digital age, type has become a standard, undisputed essential tool, function or element for everyone. But behind the astronomical number of choices, the art and psychology of type remains a deep and thoughtful creative journey. And in this regard, how can Type be explored in a more emotional and intimate way?

Anchored in the principle that creative engagement supports self-expression, reflection, and self-awareness, this project aims to develop a toolkit designed to support the well-being of the user through short, hands-on activities. And in this process, to bridge type interaction and the idea of empowering a well-being experience.

Grief, As I Know It Now

Print, Illustration and Publication

Grief, As I Know It Now presents a collection of stories and perspectives on the experience of grief – to reveal the varied ways it may be encountered, and lived with.

Focusing on non-death losses – which often lack visibility, acknowledgement and time to be understood – the work calls for greater awareness towards grief that exists in pockets of our lives waiting to be addressed, and prompts reconsideration towards how we recognise and respond to grief – how we expect it to unfold, and which experiences we consider worthy of it. As a whole, the project hopes to encourage an approach to grief that embodies greater empathy, patience, and space for understanding, within oneself and in relation to others.

Quiet Corners

Illustration and Publication

Living with social anxiety means constantly fearing judgment and battling self-criticism, often leading to overwhelm and isolation. Many of us mask these struggles, hiding behind quiet compliance, yet silently longing for a space where our true emotions are seen. However, due to stigma, social anxiety is often dismissed or misunderstood.

Quiet Corners is my response to this silence. Through an anthology of illustrations using inanimate objects as metaphors for different symptoms and experiences, I aim to visually articulate the hidden realities of social anxiety. Bound into an illustration book, these experiences bring the unseen to light and create a comforting and approachable space where those with social anxiety feel understood, and others gain empathy and awareness.

Wai Po

Illustration and Publication

This project involved a month long stay in a small kampung, Bekok. As fading intergenerational recipes becomes increasingly rare, the aim of my project is to document oral stories and recipes, preserving my family and cultural traditions that might otherwise be lost.

Bekok is located in the Segamat District, Johor, Malaysia. It is where my grandma grew up and where she still lives today. During my stay, we talked about her childhood and family, and also understood her love for cooking better. Her love language is cooking. Cooking brings family together and that is my waipo's happiness.

A key part of the project is recording the dishes my grandma enjoys making, and those I hope to learn from her. Through this, I captured the traditions and celebrations tied to food, as these are central to her life and ours.

The project extended beyond collecting recipes and documenting her past: it was an opportunity to translate the shared memories we created in that month into something tangible that our family can safekeep.

The Fading Kallang Roar

Illustration, Print and Publication

The Fading Kallang Roar explores the decline of Singapore football and its fading cultural relevance among Singaporeans. A drought of media coverage and a scarcity of shared stories have pushed the local game into the shadows, causing support for the sport only during major successes.

Kicking off with the raw energy of the Kallang Roar, the project traces the sport's descent into the struggles of the modern era, a journey through glory, frustrations and glimpses of renewed hope. Curated print media, fan stories and audio recordings, together evoke the sport's heritage while offering a collective voice for our fans. This project hopes to restore pride and passion in Singapore's football.

Scatterbrain

Web Application and Print

Scatterbrain explores forgetfulness through over-engineered and maximalist memory tools. The tools created are not usable consumer products, but a satirical commentary on design's ability to aid our human memory and performance.

We offload our memory, are bombarded by unnecessary notifications all the time, and are pressured to perform efficiently with the help of these tools. It creates information overload, attention residue, stress and anxiety to keep up with a fast-paced world, which are the very contributing factors to a poorer memory.

The final tools, a web application and printed planner, challenges our impulse of achieving flawlessness. The project also urges the audience to reframe their relationship with forgetfulness as not a moral failure, but an inevitable part of being human.

Someone Once Told Me...

Illustration and Publication, Graphic Novel

Growing up in a modern world often means having to live through life while carrying fragments of inherited wisdom to steady us. Javanese proverbs, traditionally passed down through generations through oral storytelling, offer quiet guidance when facing moments of emotional uncertainty.

Someone Once Told Me... is a semi-fictional graphic memoir that follows a girl's search for comfort and meaning through these proverbs as she navigates identity, memory and belonging. Drawing from personal experiences and reimagined moments, the story reflects on the continued relevance of traditional wisdom within our modern life. The project presents a graphic memoir as a contemplative space where cultural heritage and personal reflection can coexist gently, side by side.

The Pilcrows

Print, Illustration, Publication, Online personality quiz

From the ashes of a seemingly defeated, burnt-out creative world emerges a resistance group of superpowered design students called *The Pilcrows*, determined to design a classroom that embraces the vulnerability and challenges of learning what it means to be a designer today.

Combining storytelling and design through illustrated guidebooks, posters, merchandise and a personality quiz, it highlights the importance of criticality and curiosity in our education as designers - that exploring who we are informs how and what we design, as well as which beliefs and habits we reinforce in our collective learning as a discipline. It seeks to empower prospective and current design students in developing a sustainable, meaningful practice driven by intrinsic values and creative joy.

Mimirats

Print, Illustration and Publication

Mimirats is a fictional magazine set in an alternate universe where human experiences are reimagined through anthropomorphic rat characters. Combining real-life interviews, participant-generated comics, and interactive features such as quizzes, puzzles, crafts, and collectible inserts, the publication blends documentation with playful storytelling. It draws on oshikatsu practices as a conceptual framework to examine how emotional attachment, care, and fandom operate in everyday life.

Grounded in Singapore's fast-paced and hyper-competitive environment, where many adults experience burnout and self-doubt, *Mimirats* reflects the emotional realities of the "rat race." It explores how humour, cuteness, and shared community can function as tools for coping, healing, and finding moments of joy.

Memory Mee

Packaging and Website

Memory Mee is a visual archive that documents personal and collective experiences associated with instant noodles. Often dismissed as cheap or insignificant, instant noodles are instead examined here as vessels of lived experience, carrying routines of care, coping, and connection embedded in everyday life. Through interviews, stories are translated into reinterpreted instant noodle packaging. The project reframes instant noodles as objects capable of holding meaning, showing how lived experience often resides in the most overlooked forms.

Welcome to Chat

Website and print

With the rising usage of artificial intelligence (AI), society's overreliance on AI has also been increasing. This growing trend stands out and led the artist to wonder if the issue might exacerbate in the future and how to possibly prevent it.

Thus, the project centers around the creation of a hypothetical society where humans willingly entrust every life decision to AI and would manifest in the form of an alternate reality game (ARG) website. That would include instances where the viewers could seek out more hidden lore in this universe. And attempt to find a hidden resistance group that has infiltrated and hidden itself in plain sight on the platform.

Welcome to Hell HQ

Typography, Publication, Print

Welcome to Hell HQ reimagines the Ten Yama Kings from the Ten Courts of Chinese Hell. Each King represents a moral value but is traditionally portrayed through fear-driven, intimidating imagery as enforcers of punishment. This project aims to reframe these figures into approachable advocates for moral values and lessons relevant to everyday life.

Set within a familiar school system, each King adopts a distinct school-based persona, brought to life through an experimental typographic publication where their personalities and teachings are communicated in a more engaging and accessible way. By adapting traditional beliefs for a modern audience, the project invites audiences to reflect on their actions and see these moral lessons as meaningful and relatable rather than distant or intimidating.

Boundaries For Sale

Illustration, packaging, print, video and installation

A people-pleaser is someone who disregards their own needs to satisfy others, driven by their desire for acceptance and to avoid conflict.

While often perceived as a selfless and praiseworthy act, this behaviour becomes problematic when unreciprocated and done in excess. They go on to suppress their dissatisfaction, which makes them miserable and unable to stop this compulsive behaviour.

Boundaries For Sale disrupts the narrative that people-pleasing is simply "being nice". This project uses the metaphor of a convenience store, to portray how conveniently people-pleasers make themselves available for others. It is a satirical, experiential installation, with products to amplify the detriments of these habits. Ultimately, it serves as a reminder for people-pleasers to set healthier boundaries and lead a more authentic life.

The Sweet Spot

Interactive Projection and Publication

What is art if it does not connect with its audience? What is design if it is not understood? Far too often, artists and designers prioritise conceptualisation over understandability, leading to a disconnect between creators and their audiences. This project seeks to bridge that gap, by investigating how creatives can navigate "The Sweet Spot" between conceptual complexity and audience comprehension. Using typography as a testing ground, it explores how visual intricacy in typefaces influences both enjoyment and legibility across varying audiences. The goal is to equip artists and designers with a greater understanding of how to optimise complexity levels for maximum audience understanding and enjoyment.

Drawn in Strokes 划·画

Publication and Print

Drawn in Strokes explores the beauty of Chinese characters through a contemporary Singaporean lens. In a society where English dominates everyday communication, many young Singaporeans have grown increasingly distanced from the Chinese language despite it being a mother tongue. This project seeks to bridge that gap by reintroducing Chinese characters not merely as linguistic symbols, but as a medium of personal and cultural expression.

Through the deconstruction of Chinese characters into their fundamental components, the layered meanings within each stroke are revealed. These components are then used as building blocks to reconstruct new Chinese characters that reflect Singaporean cultural traits. In doing so, the project invites audiences to form personal connections with the Chinese language beyond its functional use.

Registry of Fading Wilds

Social Media, Publication, Branding

Registry of Fading Wilds is a design campaign that reframes Singapore's overlooked secondary forests as living archives of natural heritage, while questioning the tensions within the "City in Nature" narrative. Grounded in archival material, photography and anecdotal documentation, it identifies and interprets vulnerable wild spaces that persist despite urban pressures. Through a cohesive system of branding, print editorial, and social media storytelling, the project translates ecological and cultural narratives into accessible, public-facing formats. By reducing the perceived distance between people and these landscapes, this project aims to serve as a bridge—spotlighting these forests and fostering a more critical, affective engagement with them at risk of gradual erasure.

Mortal Ascend

Publication and Merchandise

Mortal Ascend documents Singapore's homegrown divine figures, individuals from different faiths who were once mortal but are now worshipped within Chinese religious practice. As cultural traditions decline, some of these figures remain quietly honoured, while others have faded into obscurity, their stories gradually being lost.

The lives of these figures act as lenses into the past, offering insight into their journeys, the concerns of a past era and prevailing gender perceptions.

Rather than questioning whether these figures truly existed, *Mortal Ascend* focuses on preserving their stories. Through research, fieldwork, and visual storytelling, the project serves as a bridge between older storytellers and audiences.

Snowfall at the Equator

Print, Illustration

Snowfall at the Equator is a data visualisation project that explores the concept of dreams as wishes and life aspirations among young adults. Through data collected from surveys and interviews, participants' dreams are translated into unique handcrafted and hand-drawn snowflakes called dreamflakes, with attributes such as colour, size, and placement showing different data types, representing the uniqueness, imperfection and ephemerality of dreams.

Together, the dreamflakes form a symbolic snowfall at the equator, a physical manifestation of their most desired dreams, aim to created an immersive, collective experience and encouraging reflection towards people who still dare to dream.

Weeding

Publication, Motion Graphics

In today's design culture mediated by AI, there is a strong emphasis on order and consistency. While this brings efficiency and clarity, it can also result in visual languages that feel refined, yet distant from lived experience.

Weeding offers an alternative perspective. It explores how chaos found in imperfection, fragility, and transience can be transformed into a visual language that restores emotional resonance and authenticity. Inspired by Taiwan's street scenes, where order and chaos naturally coexist, the project embraces this relationship as part of its design system. Through a theory book, motion graphics, and a stationery set, *Weeding* aims to redefine design as sensibility made visible, ultimately cultivating a more sensitive way of seeing and feeling chaos.

Meanings, Assembled Prints and Motion Graphic

We are surrounded by words every day, even when we don't notice them. They appear in conversations, books, music, signs, screens, texts, and in the stories we hear growing up. Yet language is never fixed. Meaning shifts through context, arrangement, and interaction.

Meanings, Assembled explores language as something that is fluid rather than fixed. By breaking a series of original poems into sentences, phrases, and individual words, the project reconstructs meaning through an interactive experience, inviting audiences to re-create the meaning and structure of the original poems, to form their own, and to rediscover the power and impact of words and their relationships with one another through this process.

35,000 Decisions

Packaging and Illustrated Publication

35,000 Decisions explores how the seemingly insignificant decisions we make each day may quietly have a profound impact on our lives. Grounded in the idea that a person makes an average of 35,000 decisions daily, the project examines the unseen weight of micro-choices through tactile, interactive storytelling.

Taking form through participatory packagings and a printed publication, the project guides viewers through both choice and reflection. The packaging invites them to make selections and encounter unfolding consequences, while the publication presents stories in which small, ordinary acts lead to far-reaching outcomes. Together, they translate decision-making into a layered visual experience, reflecting on how life is shaped not only by major life decisions, but also by choices whose significance is rarely legible in the moment.

Game

Game is an emerging interdisciplinary field that invites us to consider how play and game theory inform creative design.

In this showcase, students explore gameplay principles and mechanics while developing a broad set of technical and artistic skills. The resulting projects span a wide spectrum from experimental and entertaining games to educational and socially engaged, play-based experiences, demonstrating the diverse potential of games as a medium for expression and interaction.

ZombDayZ

3D Idle Game

Step right into the dawn of an apocalypse in this integrated 3D idle game.

You follow a reclusive genius - a hikikomori scientist cast aside by society. In the midst of this zombie outbreak that ravages the world, she sees an opportunity - her moment to rise, and to prove everyone wrong.

Together, you'll help her venture out to gather resources, support her groundbreaking research, and build a sanctuary that offers warmth in a collapsing world. Every discovery, every upgrade and every quiet moment brings her closer to achieving a cure.

As the journey unfolds, unsettling truths begin to emerge. What - or who - truly sparked the apocalypse?

In a world overrun by the undead, will she achieve her goal?

After Life Woes

Concept Art Book

After Life Woes is a comedy concept art book, heavily inspired by Singapore Chinese customs and festivals. Follow Wan Ning and Shan Jing, spirits who have taken up the role of Wardens, aiming to be granted an audience with the Heavenly Empress. They must not only apprehend wanted spirits to accumulate enough karma, but also be the first among all Wardens to turn their target in to their higher-ups. With the fierce competition, the duo must be at their best with their newly bestowed abilities, or they may linger for longer than they desire. However, as with life, the time after death can be difficult and bizarre, especially with the eccentric cases they will come to deal with.

How far will your complicity go, and how much will it cost you?

A low-ranking miner stuck as a cog in the industrial machine of a megacorporation, you are tasked to enact the swan song of a distant, foreign planet. Sent on a solo expedition to extract the final resources it has to offer, you must navigate its layered depths through turn-based combat and exploration.

Fulfil your extraction quotas, upgrade your weapons, interact with the fauna, and unearth hidden truths. What begins as a routine extraction morphs into something more intimate as you delve deeper; piece together the true nature of this planetary body that refuses to relent, and the fragments of a classified expedition lost to unexpected consequences.
